

Chemical Structure Searching

MMS

Merged Markush Service

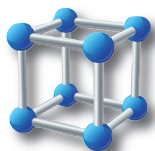

MMS provides structure access to patent documents using the powerful Markush DARC software:

The database is integrated with the PHARMSEARCH (PHARM) and Derwent World Patents Index (DWPI) bibliographic files to provide comprehensive retrieval.

MMS viewer

MMS coverage

Chemical patents

- From January 1987 to the present
- All Derwent Chemistry Resource (DCR) compounds

Pharmaceutical patents

- From 1981 for GB and DE offices
- From 1978 for EP, FR, US and WO offices
- BSM French Drug Patents from 1961 to 1978 (the complete collection)

Testimonial

Suzanne Robins, Patent Information Services, Inc. President

"I consider it absolutely essential to search Questel's MMS database as part of a thorough markush chemical structure search. I often retrieve unique structures from MMS not found elsewhere."

Over 2.8 million records
Generic and DCR Structure records

Since 1 Markush record describes an average 300 specific compounds,
 MMS represents a total of at least 600 million single compounds.
